

GOLDEN RULES

8 Simple Rules for Profitable Trades

1. **Do not** trade the **Asian Market** section if you are not an experienced Trader.
2. **Do not** Trade a currency pair if **both Markets are closed** (See our **Best Times to Trade the Forex Market** PDF file)
3. The currency **driving** the Market will have **-7** or **+7** and the Market **related** with that currency has to be **open** to be considered as a **Driver**. Example: AUD is **+7** but the market is closed so the AUD **is not** the **Driver** at this time.
4. To consider a Trade the **Support and Resistance Breakouts** on the currency you choose to trade has to have at least a number **+5** or **-5**. That means: **5** out of **7** broke the **Support and Resistance**.
5. To consider a **Trade**, the currency pair you choose has to have **Trend**. The time frames **H4** and **D1** needs to be pointing to the same direction. **Look for a fresh cross or a bounce on H4** on the moving average. Pips/profit can be gotten against the **Trend** but it is wise to trade with the Trend.
6. Check the distance (in pips) from **Intraday Support and Resistance** to **H4, D1 Support and Resistance**. You can see **Intraday Support and Resistance** at the **ATM Dashboard**. The reason why we calculate this is to get a clear picture of a possible move that can occur.
7. When you received the **Signal (alert)** on your cell phone go to your computer and match the **Driver +7 or -7** with the best **opposite** numbers. Please see below:
 - **+7 with -3, -4, -5, -6, -7** or
 - **-7 with +3, +4, +5, +6, +7**
8. Check the **news** for the session you are going to trade, paying attention to upcoming **news** is as important as everything else discussed here.

If you follow these rules and use our Money Management with an exit plan, you will win!
